

Online Banking Mobile App

(Name - Puja Shah)

The project is an online banking mobile application. In today's world, banking has become an essential part of life. Banks have realized that people are now looking for more convenient and accessible methods of banking, and as a result, mobile banking has become increasingly popular. Mobile banking allows customers to manage their bank accounts from their mobile devices, making banking more convenient and accessible.

The problem that this online banking mobile app will attempt to solve is the inconvenience of traditional banking. Many customers find it difficult to visit banks during working hours and have to take time out of their busy schedules to do so. This can lead to long wait times and frustration, which can negatively impact a customer's overall experience with the bank. This app provides an alternative solution to traditional banking by offering customers the ability to manage their bank accounts from their mobile devices, at any time and from anywhere. The benefit of this app is that it will make banking more convenient, accessible and efficient for customers, leading to improved customer satisfaction.

The target users of this app will be individuals who have a bank account and are looking for a more convenient and accessible way to manage their finances, businesses, students and retailers. The stakeholders of this app will be the bank and its customers, who will both benefit from the improved customer experience and increased efficiency. The bank will benefit from increased customer satisfaction, and customers will benefit from the convenience and accessibility of mobile banking. Moreover security consultants, mobile phone providers and third party payment providers.

The features that I would include for my online banking mobile app will be secure login process, account management, bill payments, mobile deposits, transfers, customer service, card management and notifications.

There are several similar products on the internet, including apps from large banks such as Chase, Bank of America and PNC Bank. These apps offer similar features to the online banking mobile app that is being proposed, but the goal of this app is to provide a more convenient, accessible and efficient banking experience for customers.
